

Fox Strengthens Team Ahead of Return to Production

Fox Resources Limited (ASX: FXR, Fox) today announced the appointment of Ms Tamsin Williams as Microbiologist to help drive the development of the Company's new heap leach operations for the Radio Hill mine and associated sulphide ores.

Ms Williams will work closely with the Company's executive management team to provide expertise and guidance to the development of bacterial heap leaching at the projects in the Pilbara of Western Australia.

She has held senior management roles at GeoBiotics, LLC, Pacific Ore Limited and BacTech Limited in recent years. Ms Williams' experience includes over 14 years experience in bacterial leaching both with tanks and heaps.

Ms Williams was previously involved with the development, design, engineering, construction and commissioning of the successful Radio Hill heap leach trial that was run from 1999 to 2001. She was instrumental in developing saline resistant bacterial culture and holds a number of patents.

Fox Resources' Managing Director, Mr Bruno Seneque, said the Company was extremely pleased to have secured the services of Ms Williams.

"Tamsin's contributions will certainly fast track our return to production and improve the economics of our recoveries," said Mr Seneque. "Her previous experience at Radio Hill and her specific knowledge of bacterial leaching is an ideal fit to add immediate value to Fox."

As Fox launches a new era for the Company, a strengthened team has been established to help drive additional shareholder value.

Key technical appointments during the year also included Mr Len Spencer as General Manager - Pilbara Operations. Mr Spencer has over 30 years experience and has held a number of senior management roles including the successful design, construction and commissioning of European Nickel PLC's pilot plant facility for acid heap leaching of nickel laterites in Caldag, Turkey.

"We believe our enhanced team, both in the technical and management areas, have already started to shape the Company's new growth strategy."

About Fox Resources

Fox Resources (ASX: FXR, Fox) is a mineral development company with a substantial land holding in the Pilbara of Western Australia and established relationships with China.

Fox has a new operating strategy, based on capitalising the 300,000+ tonnes of stockpiled material to establish an initial five-year heap leaching operation, due for commissioning in late 2010. Part of this strategy is defining further base metal resources to incorporate into future heap leach operations.

The Company believes the implementation of a longer-term production strategy will drive positive cash flow in the near-term and deliver positive results for shareholders.

Fox is entering a new era of growth with a strengthened team, new direction and several near-term opportunities.
